

DHANANJAY JANI

FULL STACK DEVELOPER | .NET DEVELOPER | GAME DEVELOPER

+91 6353682547 | hello@danijani.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Developer with 1 year of corporate internship experience across Python backend/data processing and C#/.NET full-stack development. Hands-on experience with ASP.NET Core, React, PostgreSQL, REST APIs, authentication, Entity Framework Core, automation, and data reconciliation. Also building software projects with .NET/WPF and Unity, with additional hands-on exposure to Linux and Docker.

EXPERIENCE

Software Developer Intern — Cygnet.One | July 2024 – June 2025

8 months Python backend/data processing | 4 months C#/.NET + React full-stack

- Developed and refactored Python data-processing workflows using Pandas, NumPy, Regex, PyPDF, Psycopg2, Selenium, and ORM-based architecture.
- Worked on a Credit Card data reconciliation project, refactoring the existing implementation into a modular architecture, separating business logic, merging Excel data, and introducing ORM-based database operations.
- Worked with Flask and REST APIs, CRUD operations, file management, PostgreSQL connectivity, and Python OOPs.
- Contributed to an Adani litigation-management project involving recursive downloading of GST portal documents for nearly 1,000 employees using Selenium; monitored automation runs and manually verified downloaded documents for correctness.
- Worked as a full-stack developer using C#, ASP.NET Core, and React, with MVC architecture, routing, middleware, dependency injection, and Entity Framework Core.
- Worked with JWT authentication, cookies, sessions, repository patterns, background jobs, and REST API integration, along with React Hooks, React Router, and Axios for frontend/API interaction.

TECHNICAL SKILLS

Languages: C#, Python, C, C++, JavaScript, TypeScript, SQL

.NET / Backend: .NET 8/9, ASP.NET Core, Minimal APIs, Web API, MVC, Entity Framework Core, REST APIs, JWT authentication, Middleware, Dependency Injection, Background Jobs

Python: Pandas, NumPy, Selenium, Flask, Psycopg, PyPDF, Regex, ORM, REST APIs, OOP

Frontend: React, Vite, React Router, Axios, Hooks, Material UI

Databases: PostgreSQL, MongoDB, Redis, SQL/database design, MariaDB/MySQL

Tools / DevOps: Git, Docker, Linux, Nginx, AWS/EC2, Visual Studio, VS Code, Postman, pgAdmin, Beekeeper Studio, FFmpeg

Game Development: Unity 2D, Unity 3D, C#, Unity Input System, WebGL, 2D gameplay/UI, mobile/touch controls

IoT / Embedded: ESP32, Arduino, C/C++, DHT22, MQ-2, ThingSpeak, Wokwi

SELECTED PROJECTS

CloudNext — Full-Stack Cloud Storage Platform

C#, ASP.NET Core Minimal Web API, React, TypeScript, PostgreSQL, Redis, Docker, ImageSharp, FFmpeg

- Built a cloud-storage application with authentication, folders, file upload/download, sharing, trash, and media thumbnails.
- Implemented JWT access tokens with refresh-token rotation using an HttpOnly cookie and short-lived access tokens.
- Designed PostgreSQL-backed data models and integrated Redis for application-level workloads.
- Implemented server-side image/video thumbnail generation using ImageSharp and FFmpeg and organized per-user file storage.
- Worked with Nginx, Tailscale, Docker, NFS, and Linux VMs for self-hosted deployment and network access.

AdGuard Home Manager — Windows Desktop Application

C#, .NET, WPF, Windows Services, HTTP APIs

- Built a WPF application to manage the local AdGuard Home service through a graphical interface.
- Integrated Windows Service control and AdGuard Home HTTP API calls for service and protection management.
- Implemented asynchronous service operations, status indicators, protection controls, and dashboard launching.

Unity 2D — Flappy Bird Clone

Unity, C#, Unity Input System, WebGL

- Built a simple 2D Flappy Bird-style clone while learning Unity game-development workflows.
- Implemented gameplay, UI, input handling, and browser deployment using Unity WebGL.

Unity 3D — Ongoing Learning

Unity, C#, Unity Input System, 3D gameplay fundamentals

- Currently developing Unity 3D skills through learning projects and experiments.
- Unity 3D: 3D scene setup, GameObjects, Components, Prefabs, Transform, Physics/Colliders, Rigidbody, Cameras, Lighting, Materials, UI/Canvas, C# scripting, Unity Input System, Scene Management.

PORTFOLIO

danijani.com — Personal portfolio and project showcase.

EDUCATION

Master’s Degree — Final Semester — School of Emerging Science and Technology / Gujarat University | 2027

Bachelor of Computer Applications (B.C.A.) — Kaushalya – The Skill University | 2025

12th Science — Mathematics — Divyapath Campus | 2018

ADDITIONAL TECHNICAL EXPERIENCE

- Practical experience with Linux, Docker, networking, databases, APIs, deployment, authentication, file systems, and troubleshooting across Windows and Linux environments.
